

FusionLive, an Opidis solution

Engineering Document Control and Project Collaboration in the Cloud

Expected benefits

- » Reduce overall project delivery time by up to 20%
- » Start projects up to five times faster
- » Accelerate vendor document turnaround by up to 50%
- » RFIs reduced from seven to three days
- » 20% increase in worker productivity
- » Increase project performance and reduce risk around contractual obligations
- » Decrease dispute phase
- » Supply complete, accurate master document and tag register at handover
- » System up and running in as little as two weeks

For Owner Operators and EPCs, successful execution of complex capital projects requires performance-driven engineering, coupled with the use of innovative software. FusionLive, a cloud-based collaborative solution, accelerates your project delivery to drive cost efficiencies, reduce delays and improve profit margins.

With over 25 years' experience, Opidis has worked with leading engineering companies around the world to understand the complexities of the project challenges they face and how to overcome these.

Together, we have developed a pioneering platform that transforms the way every member of the team works – from project directors to document controllers and engineers – allowing everyone to share a common view, ensuring decisions are made using the right information, at the right time. FusionLive offers project collaboration in a single, secure, easy-to-access system, with best-of-breed document control and out-of-the-box workflows.

With automated processes, project health insight dashboards, and reduced data entry, teams are more efficient and managers are enabled to be more proactive in their daily tasks. Involvement and performance of all project participants, including all third parties, is clearly visible at all times.

Smart Project Collaboration

FusionLive drives smart project collaboration through its use of a common, shared environment. From the supply chain to the Owner Operator, all project participants access the same intuitive interface. Customizable folders facilitate a flexible project breakdown structure with external suppliers given visibility of only the folders and documents they need access to. Documents can be located in seconds using the powerful search or flexible folder browsing.

Intuitive quick search

Document lifecycles and associated workflows

Review decision code and comments

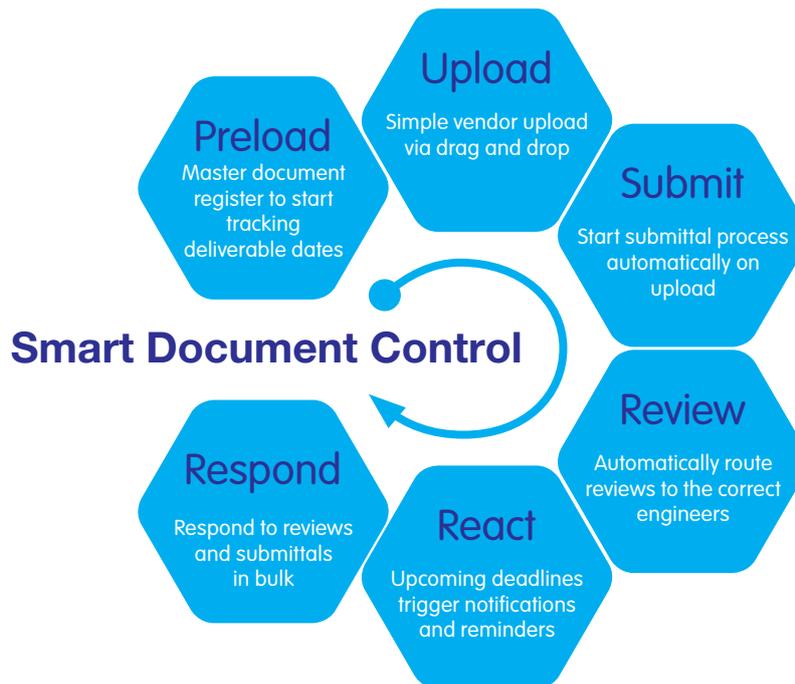

Automatic document numbering

Customizable folder structure

Reference	Title	Revision	Issue	Originator	PM Status	Decision Code
IE02-TE-M-DTK-00001	Data Sheet - Tank	0.B	Issued for Review	Horizon Engineering	Received	Under Review
IE02-TE-M-PDS-00001	Data Sheet - Pump 2	0.A	Issued for Review	Horizon Engineering	Received	Under Review
IE02-TE-M-PDS-00002	Data Sheet - Pump 2	2.A	Issued for Review	Horizon Engineering	Received	Under Review

Smart Document Control

FusionLive facilitates smart document control to simplify the submission process for vendors, automate distribution and reduce data entry for document control, accelerating the review and document turnaround period. Placeholders for resubmissions are automatically created, dates are automatically calculated and uploaded documents are automatically matched to their placeholders reducing errors and saving valuable project time.

Smart Project Dashboards

FusionLive's smart project dashboards provide insight into every aspect of your project's health, allowing users to drill down into your data and act to resolve issues. Expedite directly from the dashboard to follow up with vendors who are late, notify reviewers who are overdue and respond to submittals that are ready to be returned. Custom reports can be created and scheduled with email notifications alerting project managers to the latest project status information.

Expedite overdue activities

Identify – at a glance – deliverables that are overdue for submittal, review and issue and escalate directly from the dashboard to ensure compliance with your contractual obligations.

Monitor vendor performance

Monitor the on-time delivery of vendor documents along with the quality of the documents they are submitting to identify recurring issues or poor performance.

Monitor team performance

Monitor the volume and status of active business processes across the project. Avoid slippages and highlight bottlenecks by monitoring team performance and throughput.

Analyze project trends

View monthly summaries of data over the length of the project to monitor changes in performance, use of resources and progress against forecasted activity.

“Using the Opidis system has given us a 20% increase on the number of documents we can process, quality control check and load into the system in a day. Its simplicity and flexibility has completely changed our ways of working for the better”

Tim Houston
Document Control Lead
Torxen Energy

Summary of Key Features

- » Standard document management
 - Revision control, full version history, complete audit trail
- » Configurable document categories
 - Automatic numbering
 - Custom document properties
 - Reasons for Issue e.g. IFI, IFR, IFC, As-Built
 - Lifecycles e.g. Placeholder, Draft, Reviewed, Approved, Issued
- » Powerful search engine and folder browsing
- » Out of the box workflows
 - Transmittals / Submittals
 - Reviews / Approvals / TQs / RFIs
 - Messages
- » Mobile device support with offline document access
- » Bulk loading of data and documents
- » PDF renditions and watermarking
- » Work package creation and distribution
- » Automatic distribution of the documents according to a distribution matrix
- » Vendor and engineering reviews with comments, mark-ups and consolidation
- » Built-in document viewer with 3D support
- » Advanced reporting with report designer and custom charts
- » Management of the project via graphical actionable dashboards
- » Establish accurate tag/document relationships with automated engineering tag extraction and verification
